Caring for your child after surgery

Pain

- After surgery, your child may have some pain around the area where the surgery was done.
- You can give your child Tylenol (Acetaminophen). You may also give Advil (Ibuprofen) if your child's pain does not get better with Tylenol. Follow the directions on the bottle.
- The pain should go away in 2-3 days.

Wound Care

- The cut will be held together with special skin glue or dissolvable stitches to help it heal properly. There may also be small pieces of tape over top. If the doctor uses non-dissolvable stitches, it will be removed in the clinic in 7-10 days.
- It is most important for this area to stay clean and dry.
- Your child can still wash their hair as long as the wound stays dry. This is more easily done in the bath with an adult's help. Keep the area dry for 2 weeks, or as advised by the doctor.
- The tape may start to fall off after about a week or so, keep it on until it falls off on its own. You can trim the edges if they start to curl. Always wash your hands before and after.
- If your doctor gives you any other instructions about how to keep your child's wound safe, have them written down before you leave the hospital.

Activity

- Your child should be able to return to school/daycare after 2-3 days, or when they feel up to it.
- Contact sports/vigorous activity and swimming should be avoided for 2 weeks, but check in with your ENT doctor for specific instructions.

Call the ENT Clinic Nurse or Seek Medical Attention if:

- Your child has a fever of 38.5°C or higher that lasts for more than 24 hours, starting 2 or more days after surgery
- The area becomes more red, swollen/puffy
- The wound oozes liquid that is green/yellow and smelly
- The wound starts to open or starts to bleed
- Your child is in a lot of pain and pain medicine is not helping
- You have other concerns about your child.

Follow up

- Your child should be seen for follow up in the clinic after their surgery within 6-12 weeks after surgery, unless your doctor would like to see your child sooner
- After their surgery you can call your ENT doctor's office to schedule your appointment
