

Management of Non Neutropenic Febrile Oncology Patients

Definition:

Defined as two measurements at least one hour apart greater than 38C axilla or 38.3C oral and with ANC > $1.0 \times 10^9/L$

Triage:

It is recommended that all patients receiving chemotherapy or immunosuppressive agents be examined and have a blood culture.

Use of antibiotics in non-neutropenic patients after evaluation is not mandatory and will depend on the clinical situation/evaluation.
