	Notes				Lytes, Ca, Mg, PO4, Cr, urea, LFTs, glucose	*if applicable Further chimerism testing >24mo PRN	TSH, T4, Vit D, IGF-1, Fasting glucose and lipids	Baseline age 12 y if CED ≥4 or clinical concerns. Rpt Q1y	T&B cell panel, IgA, IgG, IgE, IgM	EBV, CMV, Adeno. HV6 only if haplo & CBT. EBV only after 3mo	RBC pit count, blood group, ferritin	U/A, urine Prot:Cr & Alb:Cr ratio	Refer to Resp if too young to perform				Prior to school entry or if concerns	1. Attenuated vaccine re-immunizations at 6 mo if no active GVHD or ongoing immune suppression 2. sIL-2 at Dx of GVHD and 4-8wk later

* See alternate screening schedule if no Graft-vs-Host Disease

\# If patient on study, refer to study protocol for additional testing

Further Surveillance

Dentistry	Annual
Gynecology	PRN
Semen Analysis	From age 18y in males
Anti-Mullerian Hormone	From age 16y in females if CED ≥ 6 g/m^2 or pelvic RT; or earlier if clinical concerns
Breast MRI and Mammogram	From later of age 25y or 8y after exposure if chest RT
Colonoscopy	From later of age 30y or 5y after exposure to abdominal RT
