Management of Non Neutropenic Febrile Oncology Patients

Definition:
Defined as two measurements at least one hour apart greater than 38C axilla or 38.3C oral and with ANC > 1.0 x 10^9/L

Triage:
It is recommended that all patients receiving chemotherapy or immunosuppressive agents be examined and have a blood culture.

Use of antibiotics in non-neutropenic patients after evaluation is not mandatory and will depend on the clinical situation/evaluation.
