## CARBOHYDRATES IN INFANT FOOD AND DRINK

Breast Milk (BM) or Formula $=$

| $2 \mathrm{oz}(60 \mathrm{~mL})=4 \mathrm{~g} \quad 3 \mathrm{oz}(90 \mathrm{~mL})=6 \mathrm{~g}$ | $4 \mathrm{oz}(120 \mathrm{~mL})=8 \mathrm{~g}$ |  |
| :---: | :---: | :---: |
| Starch $=$ | $1 \mathrm{Tbsp}(15 \mathrm{~mL})$ | 3 Tbsp (45 mL) |
| Rice cereal (prepared with water) | 29 | 69 |
| Rice cereal (prepared with BM or formula) | 2.59 | 7.59 |
| Oatmeal (prepared with water) | 19 | 49 |
| Wheat-based noodles (cooked) | 29 | 69 |
| Rice/rice Noodles (cooked) | 2.59 | 7.59 |
| Cereal (e.g. Cheerios ${ }^{(8)}$ | 19 | 39 |
| Starchy Vegetables = |  |  |
| Peas | 19 | 39 |
| Butternut squash | 19 | 39 |
| Creamed corn | 29 | 69 |
| Mashed potato | 29 | 69 |
| Sweet potato | 29 | 69 |
| Mixed Foods = |  |  |
| Potato and meat and veggie casserole | 19 | 39 |
| Spaghetti, meat and veggie casserole | 1 g | 39 |
| Rice, meat and veggie casserole | 1 g | 39 |
| Fruit = |  |  |
| Pureed fruit | 29 | 69 |
| Medium banana | $1 / 6$ whole $=49$ |  |
| Other Common Foods = |  |  |
| Bread | $1 / 3$ piece $=59$ |  |
| Crackers (e.g. Goldfish) | 3 small crackers | 9 |
| Cookie (e.g. Arrowroot) | 1 cookie $=5 \mathrm{~g}$ |  |

* Please double check the carbohydrate value in the specific product that you are giving your child. The amount varies depending on the ingredients and brand*

How to determine the amount of carbohydrate in 1 Tbsp when given the value in 1 cup $=$ 1 Tbsp $=15 \mathrm{~mL}$ ( $\frac{1}{2}$ ounce) $1 \mathrm{cup}=250 \mathrm{~mL}$ (8 ounces)
$\rightarrow 1 \mathrm{Tbsp}(15 \mathrm{~mL})$ divided by $1 \mathrm{cup}(250 \mathrm{~mL})=0.06$
$\rightarrow$ If the carbohydrate value for 1 cup is 25 g , multiply this value by 0.06
$\rightarrow$ Example: $25 \mathrm{~g} \times 0.06=1.5 \mathrm{~g}$, so there are 1.5 g carbohydrate in 1 Tbsp of this product
