

## MEDICAL IDENTIFICATION OPTIONS

Medical conditions such as diabetes, cortisol deficiency or severe allergies increase the importance of letting other people know what to do in an emergency. For children, this is even more important, as they may not be able to speak for themselves. People living with diabetes or serious endocrine conditions should wear some form of medical identification to ensure that prompt medical treatment is provided in an emergency situation.

Your child's medical identification can be as unique as they are! Here is an assortment of online options available for purchase. Please be aware there may be some extra shipping charges for international products.
