

Smart Triage: A prediction-based facility quality improvement program for critically ill children

Samuel Akech, MBChB, MMED (Paeds), PhD

KEMRI-Wellcome Trust Research Programme, Nairobi, Kenya

Background

- 2016-4.9 million deaths in children aged < 5 years, most in LMICs
- Sepsis (pneumonia, diarrhea, or malaria) resulting in multiorgan dysfunction major cause of morbidity and mortality
- World Health Assembly (2017) resolved to prioritize prevention, recognition, and early treatment of sepsis

CHART 2. TRIAGE OF ALL SICK CHILDREN

Chart 2. Triage of all sick children

Emergency signs:
If any sign is positive: call for help, assess and resuscitate, give treatment(s), draw blood for emergency laboratory investigations (glucose, malaria smear, Hb)

ASSESS

Coma/convulsing

- Coma or
- Convulsing (now)

IF COMA OR CONVULSION

TREAT

Do not move neck if you suspect cervical spine injury, but open the airway.

- Manage the airway (Chart 4)
- If convulsing, give diazepam rectally (Chart 9)
- Position the unconscious child (if head or neck trauma is suspected, stabilize the neck first) (Chart 6).
- Give IV glucose (Chart 10).

Severe dehydration
(only in a child with diarrhoea)

DIARRHOEA PLUS
two signs positive
Check for severe malnutrition

- Lethargy
- Sunken eyes
- Very slow skin pinch
- Unable to drink or drinks poorly

TREAT

- Make sure the child is warm.

If no severe malnutrition:

- Insert an IV line and begin giving fluids rapidly following Chart 11 and diarrhoea treatment plan C in hospital (Chart 13, p. 131).

If severe malnutrition:

- Do not insert an IV line.
- Proceed immediately to full assessment and treatment (see section 1.4, p. 19).

PRIORITY SIGNS
These children need prompt assessment and treatment

- Tiny infant (< 2 months)
- Temperature very high
- Trauma or other urgent surgical condition
- Pallor (severe)
- Poisoning (history of)
- Pain (severe)
- Respiratory distress
- Restless, continuously irritable, or lethargic
- Referral (urgent)
- Malnutrition: visible severe wasting
- Oedema of both feet or face
- Burns (major)

Note: If a child has trauma or other surgical problems, get surgical help or follow surgical guidelines.

NON-URGENT
Proceed with assessment and further treatment according to the child's priority.

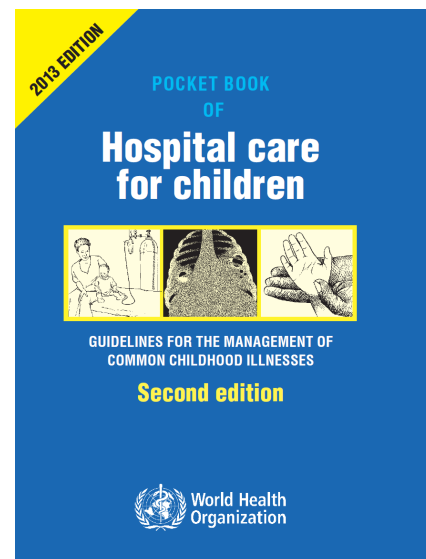

CHART 2. TRIAGE OF ALL SICK CHILDREN

Chart 2. Triage of all sick children

Emergency signs:
If any sign is positive, call for help, assess and resuscitate, give treatment(s), draw blood for emergency laboratory investigations (glucose, malaria smear, Hb)

ASSESS

Airway and breathing

- Obstructed or absent breathing or
- Central cyanosis or
- Severe respiratory distress

ANY SIGN POSITIVE

TREAT

Do not move neck if a cervical spine injury is possible, but open the airway.

- If foreign body aspirated: Manage airway in choking child (Chart 3)
- If no foreign body aspirated: Manage airway (Chart 4), Give oxygen (Chart 5), Make sure the child is warm

Circulation

Cold skin with:

- Capillary refill longer than 3 s and
- Weak and fast pulse

SIGNS POSITIVE

TREAT

- Stop any bleeding
- Give oxygen (Chart 5)
- Make sure the child is warm.

If no severe malnutrition

- Insert an IV line and begin giving fluids rapidly (Chart 7).
- If peripheral IV cannot be inserted, insert an introsseous or external jugular line (see pp. 340, 342).

If severe malnutrition:

If lethargic or unconscious:

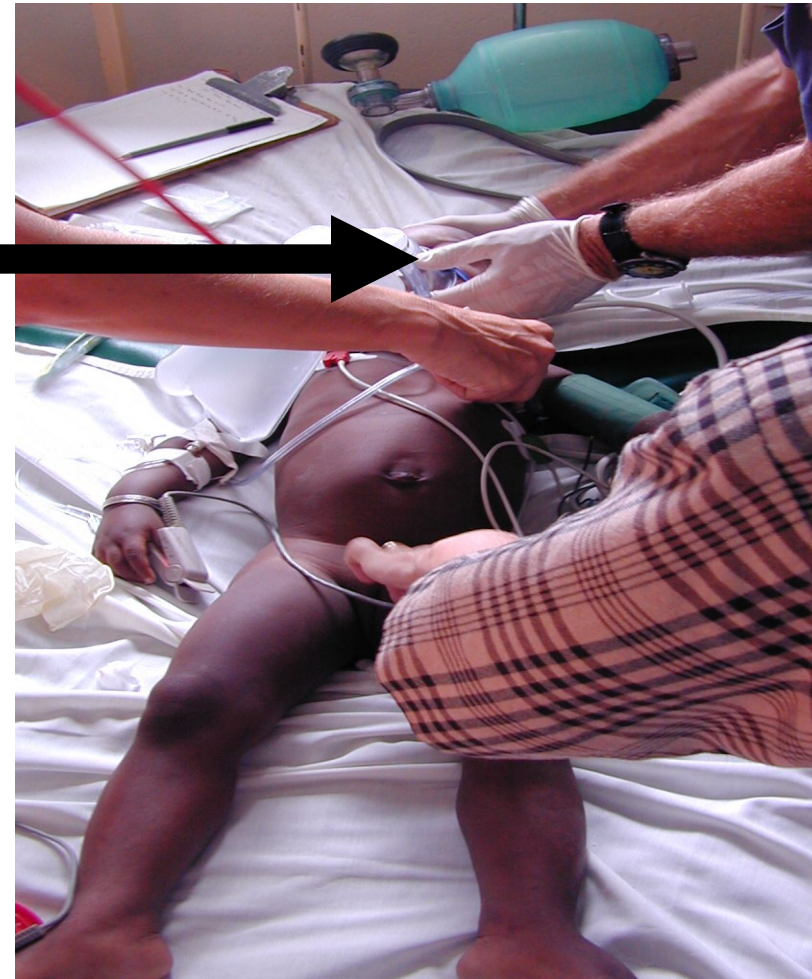

- Give IV glucose (Chart 10).
- Insert IV line and give fluids (Chart 8).

If not lethargic or unconscious:

- Give glucose orally or by nasogastric tube.
- Proceed immediately to full assessment and treatment.

Hospital Care-Triage

Reality

Crowded Triage/Emergency areas and
staff shortage resulting in missed triage

	47:48	Lab/ Pharmacy			M	9 y	Stomachache

Objectives of SMART Triage

To develop and clinically validate a digital triage tool for improving hospital waiting times to treatment administration in seriously ill children

To validate use of RFID method to track timing of interventions in children presenting to hospitals with serious illnesses

Study procedures

Phase I: Baseline data collection

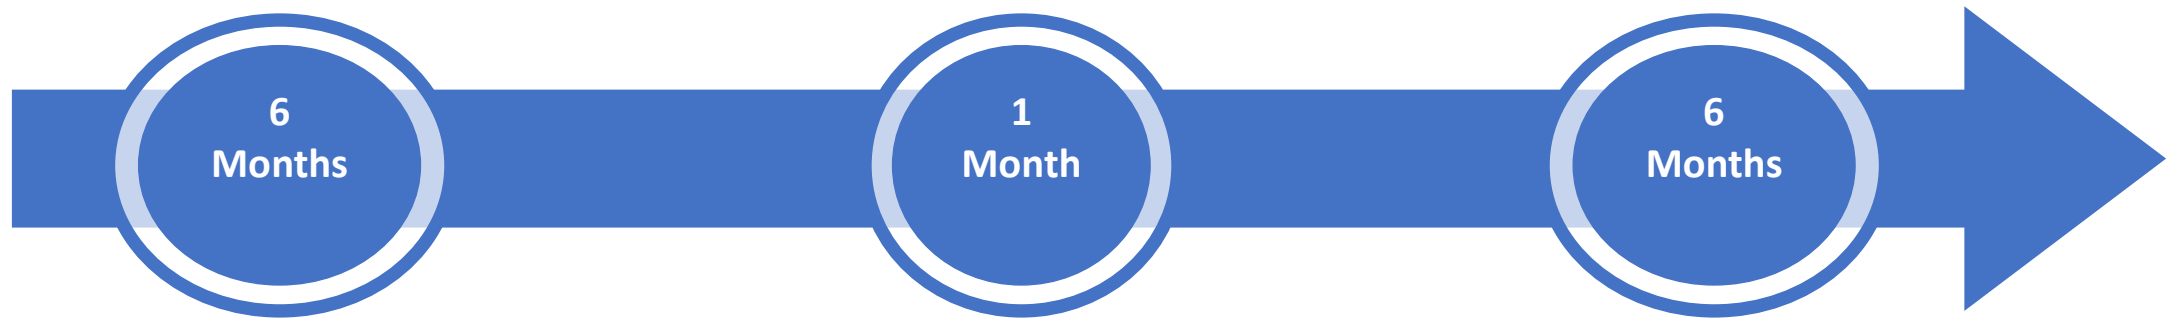

(Mbagathi & Kiambu)

Usability testing & Training Phase

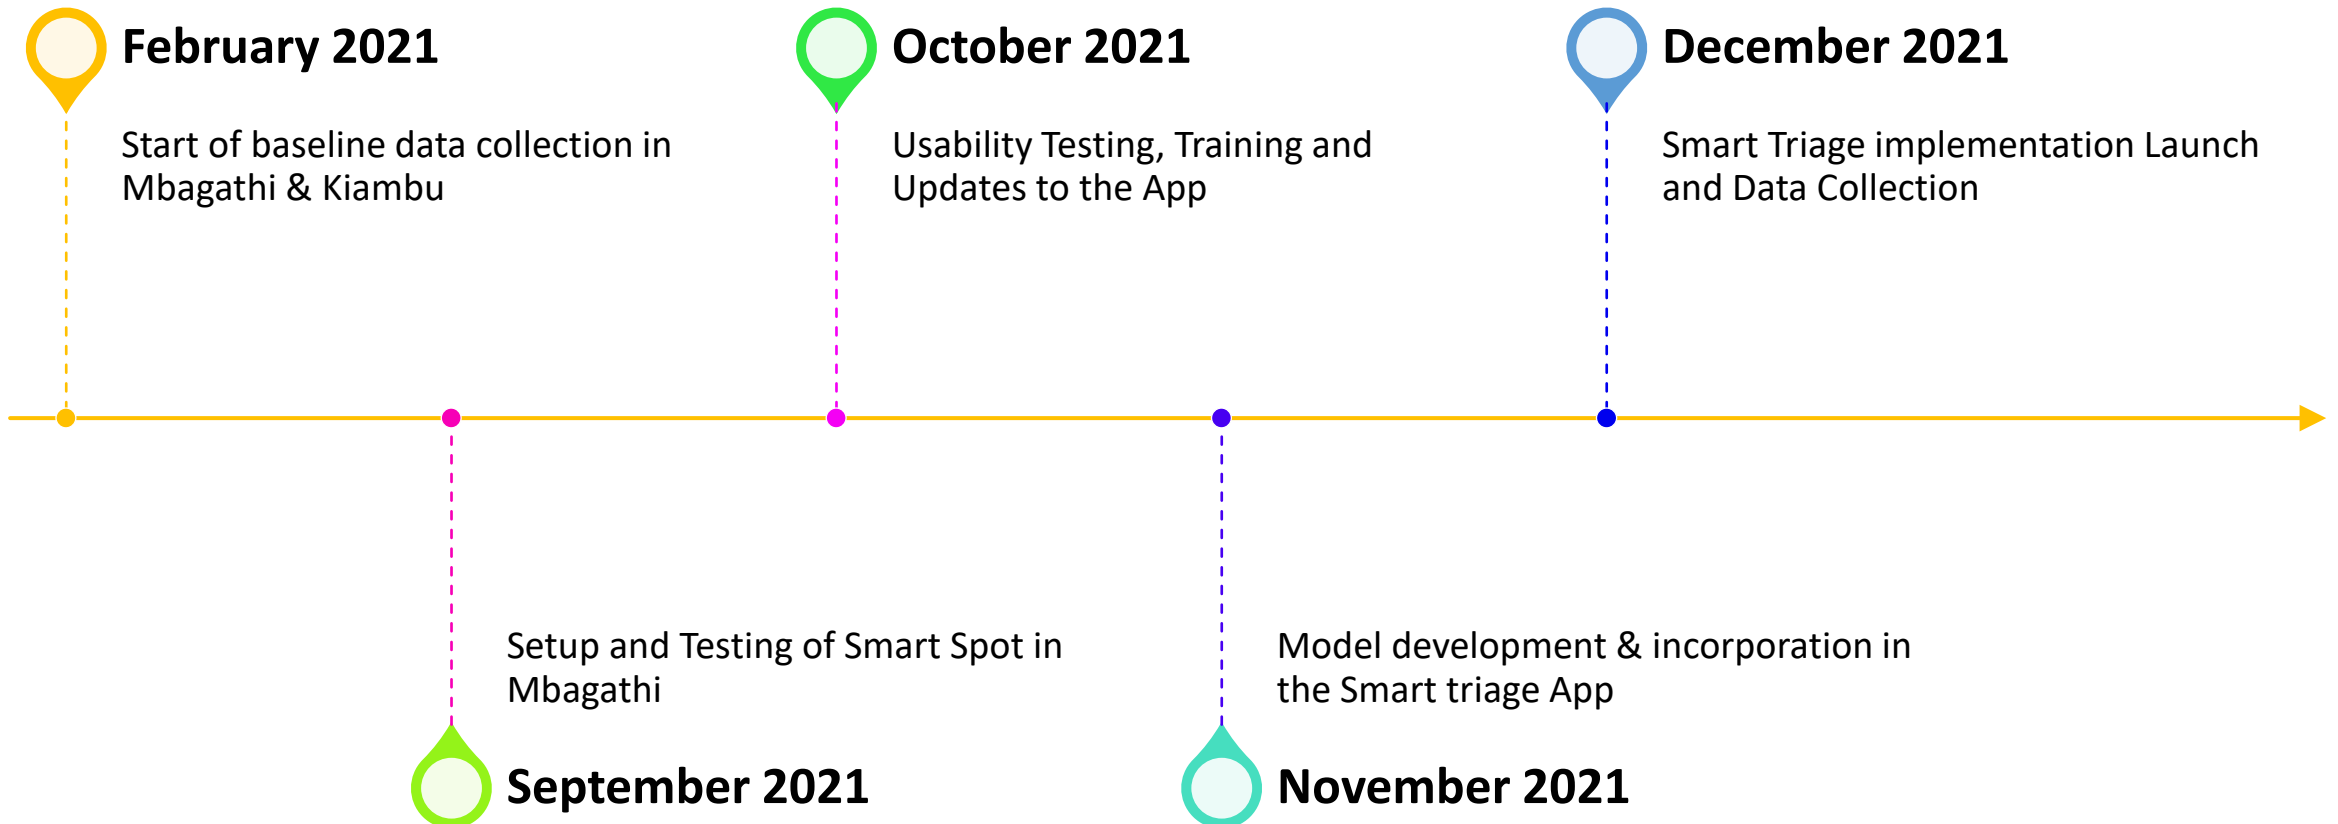

(Mbagathi)

Phase II: Intervention

(Mbagathi – Intervention site)
Kiambu – Control site

Timeline

SMART TRIAGE MODEL

Variable	Estimate	P-value
(Intercept)	-34.918	<0.0001
Continuous Variables		
Heart Rate	0.015	<0.0001
Temperature	0.877	<0.0001
MUAC	-0.017	<0.001
Transformed SpO2	0.058	<0.001
Age	0.016	<0.0001
Categorical Variables		
Parent Concern (caregiver thinks child should be admitted to the hospital)	1.828	<0.0001
Difficulty breathing (reported or observed)	0.866	<0.0001
Oedema	2.039	<0.0001
Palmar Pallor	1.703	<0.0001

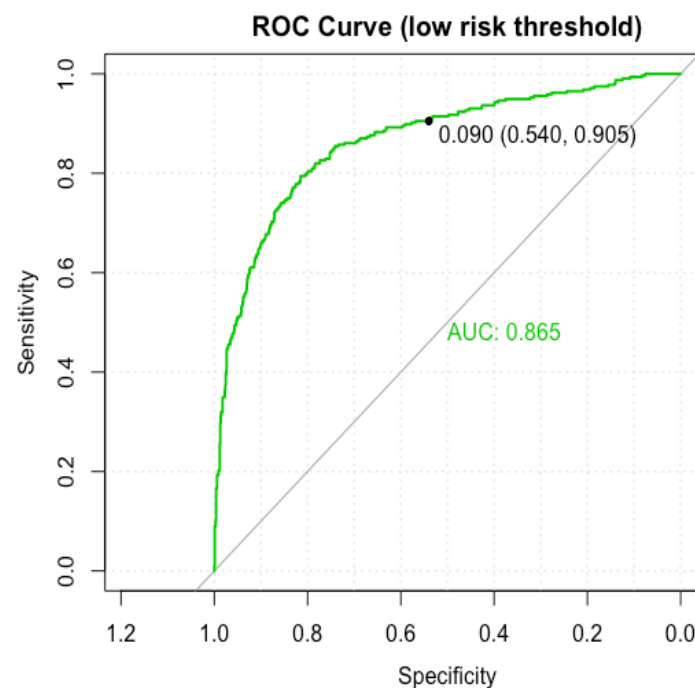

Figure 1a. Cross validated receiver operating characteristic curve of the final model in the study cohort (N=1333). The low risk threshold to classify non-urgent cases is labelled. AUC = Area under the curve.

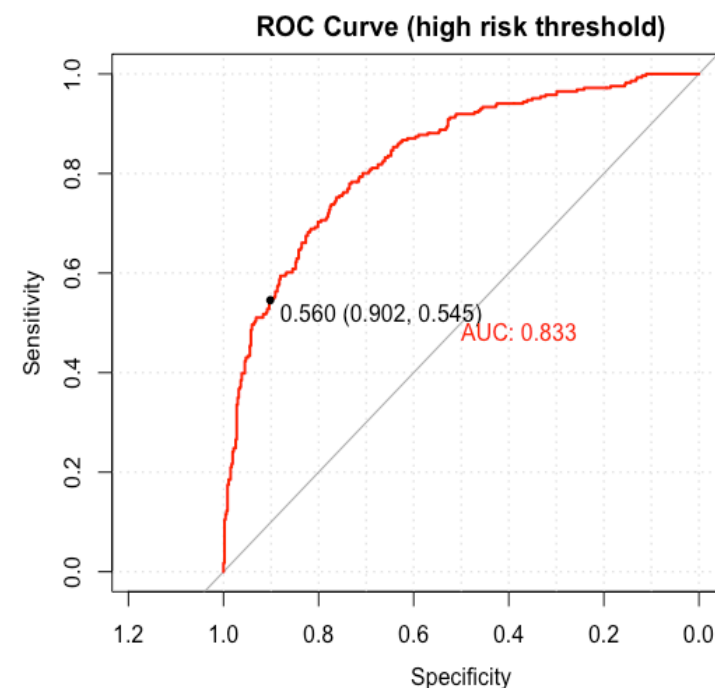

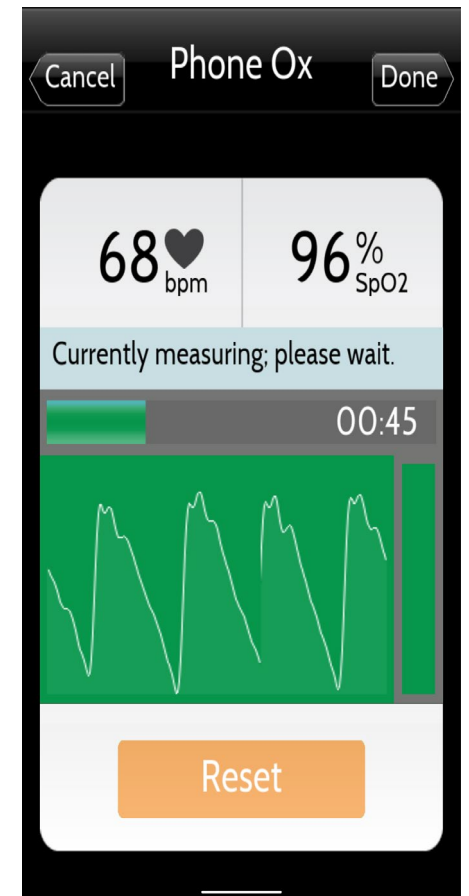

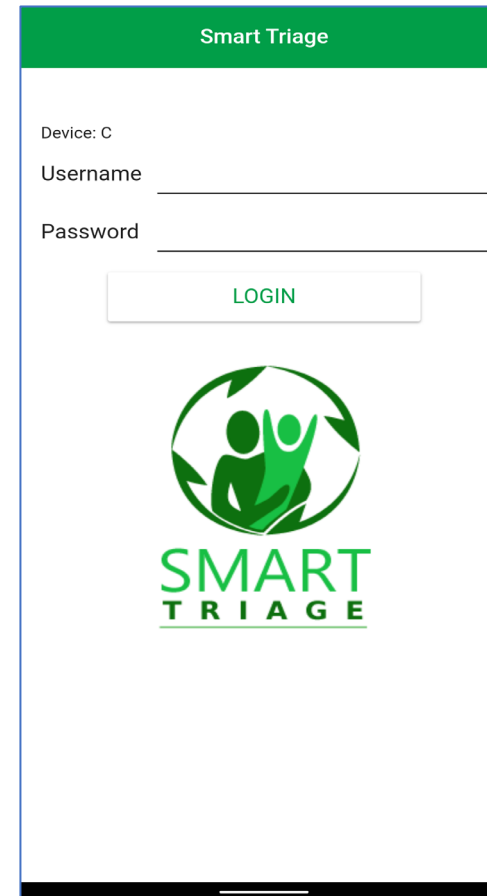

Figure 1b. Cross validated receiver operating characteristic curve of the final model in the study cohort classified as not non-urgent (N=754). The high risk threshold to classify emergency and priority cases is labelled. AUC = Area under the curve.

Smart triage App

- Used by nurses during triage to rapidly categorize patients as **non-urgent**, **priority**, or **emergency**
- Android app with attachable Masimo pulse oximeter
- Connects to local server box through WiFi
 - Authenticated with user database on server
 - Security certificate installed on each phone

TRIAGE CATEGORIES

Admission per triage category

Median time to antibiotics

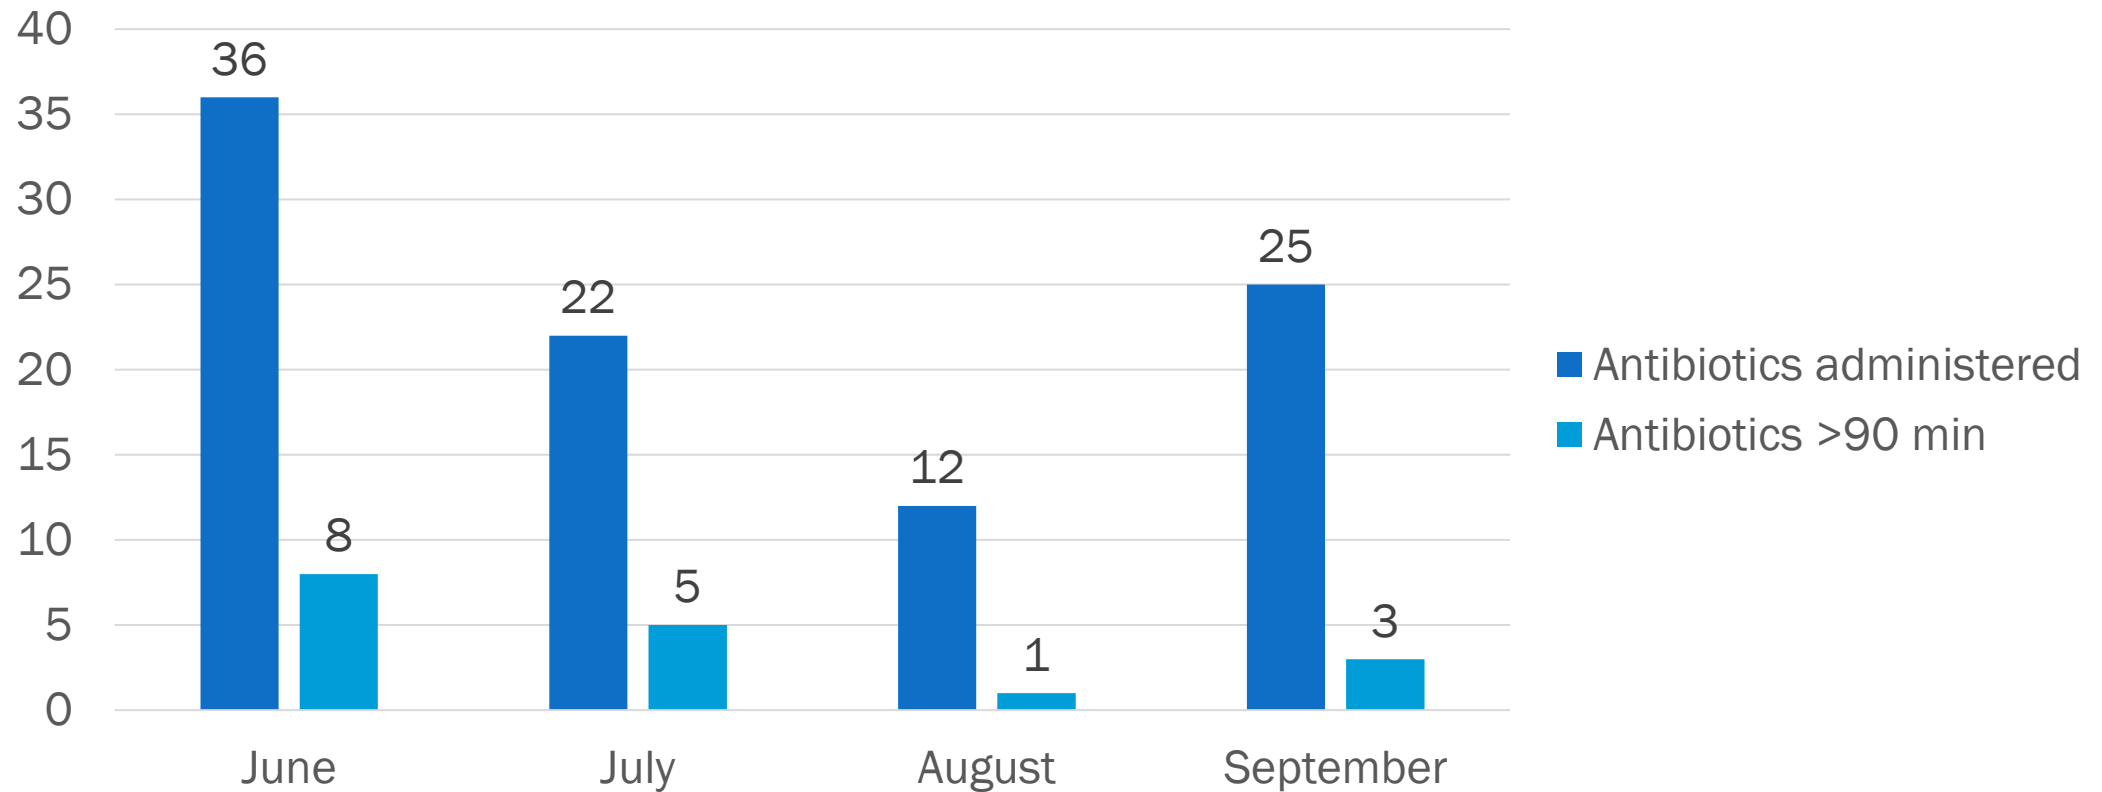

QI GOALS

All triaged children to receive treatment within 90 minutes from the time of triage.

TIME TO ADMINISTRATION OF ANTIBIOTICS

Emergency patients receiving antibiotics

Success

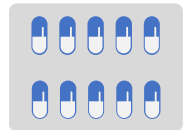

Adoption of
Smart Triage in
Mbagathi County
Hospital

Improved
patient flow at
the OPD

Prioritization
of critically ill
children.

Tracking of
treatment
administered
in the acute
room

Beacon loss

Breakdown of pulse oximeters

Triaging on weekends

Smart Triage Potential Applications

Improve risk assessment and prioritization of critically ill children at triage.

Increase the proportion of critically ill children receiving treatment within 1 hour of arrival.

Improve effectiveness and efficiency of patient flow and resource allocation.

**Integration with existing electronic health records (EHRs) in hospitals*

STUDY PROTOCOL

Open Access

Smart triage: triage and management of sepsis in children using the point-of-care Pediatric Rapid Sepsis Trigger (PRST) tool

Alishah Mawji^{1*} , Edmond Li², Clare Komugisha³, Samuel Akech⁴, Dustin Dunsmuir⁵, Matthew O. Wiens⁶, Niranjana Kissoon⁷, Nathan Kenya-Mugisha³, Abner Tagoola⁸, David Kimutai⁹, Jeffrey N. Bone¹⁰, Guy Dumont¹¹ and J. Mark Ansermino¹
